The 1944 Hurricane

Hurricane Opal delivered some blessed, soaking rain to us as she passed by—the first meaningful moisture for Dennis since Hurricane Allison in early summer. This has been an extremely dry summer for us and had we been hit with a major hurricane our plant life would have been in serious trouble. Most of our trees could not have survived a drought followed by the assault of a hurricane. We should count our blessings considering the large number of storms this year. In earlier times Cape Codders called them "line storms" or "green corn storms" and said you could count on them showing up at Barnstable Fair time—late August or early September.

Watching the damage from this year's storms on television reminded me of the 1944 hurricane. Reams of material has been written about the 1938 Great New England Hurricane but the one in 1944 passed with little but local coverage because we were in the midst of WWII.

The hurricane roared up the East Coast doing damage along the way and arrived here Thursday morning on a high tide. The tide was high enough to wash out the old Weir creek bridge, recently rebuilt and named the Robert and Mary Stone Bridge. In one house a bowl of eggs on the kitchen table made the journey without so much as one cracked egg!

Another wall of water pushed up Swan River. On the way up—and probably also the receding waters—left the bridges intact but washed away sections of the connecting roadway. 0. Thomas Murray was on Upper County Road returning to his Dennis Port home from duty at the Fire Station on Main Street, South Dennis. He dodged a large number of downed trees and on arriving at "Deb's Bridge" the road vanished. Daylight revealed his car hanging with the front wheels down over the edge and a six-foot gap to the bridge.

While this was transpiring Mother and I had our hands full at home. The kitchen ell shuddered with every blast of wind and Mother decided it was about to let go, so we moved everything, by lamplight, into the main part of the house. Even the Hoosier cupboard which was full!! The only thing left in the kitchen was the iron cookstove and the kitchen sink. I will never forget the adrenalin that ran through me. The next morning revealed that the ell had moved two feet off the foundation, the barn roof had lifted very neatly off and sailed over to land intact on top of the trees in the swamp, and we had a black house shudder with carved white sailboats that had blown in through the kitchen window. Father and Harold White moved the ell back into place and made the necessary repairs, the barn got a new roof, we drove around for days and couldn't find the house that had lost the black shutter, and it took two men to move the empty Hoosier cupboard back into the kitchen!

Further east in the Inman Road area—another low spot—a personal drama was being played out. My father kept his cows at Finnegan's meadow—now the Playland golf course but earlier known as Pound Pond. The water pushed up the old river way until eventually eight feet of water covered Lower County Road just before the Harwich town line. Father had tried to get to the barn from the Dennis side but couldn't get through the water. He went around to the Harwich side, walked along the bank until he was near the barn then swam over and released the cows. Unfortunately, he was unable to reach the bull which was staked out in the meadow, and it drowned. Daylight found the cows roaming around the village, but safe.

He dodged a large number of downed trees and on arriving at "Deb's Bridge" the road vanished. Daylight revealed his car hanging with the front wheels down over the edge and a six-foot gap to the bridge.

The Glendon Road area in Dennis Port was hit hard. Many summer cottages were reduced to piles of lumber. Some were washed off their foundations and floated across the street. These were later moved back to their original sites. Many are still standing—none the worse for their adventure. Large sections of beach were washed away all along the shore. Many houses that once had a large front yard leading to a wide beach now found themselves with water at the front door.

Further east in the Inman Road area—another low spot—a personal drama was being played out. My father kept his cows at Finnegan's meadow—now the Playland golf course but earlier known as Pound Pond. The water pushed up the old river way until eventually eight feet of water covered Lower County Road just before the Harwich town line. Father had tried to get to the barn from the Dennis side but couldn't get through the water. He went around to the Harwich side, walked along the bank until he was near the barn then swam over and released the cows. Unfortunately, he was unable to reach the bull which was staked out in the meadow, and it drowned. Daylight found the cows roaming around the village, but safe.

The 1944 Hurricane delivered some blessing in this year's summer storms. Father and Harold White moved the ell back into place and made the necessary repairs, the barn got a new roof. Life was a lot easier and we were able to go about our business. The tide had turned in Europe and the Pacific. Optimism was making itself felt and we Cape Codders surely couldn't let a "line storm" get us down.
CALENDAR

Oct. 11  7:30 P.M.  DHS Board meets at Josiah Dennis Manse.
Oct. 28  Remember to set your clocks back tonight.

1995 ANNUAL REPORT

The DHS Annual Meeting convened at 2:00 P.M. at the Jacob Sears Memorial Library and President Lura Crowell dispatched the business of the day in a prompt and timely fashion. Treasurer Joshua Crowell reported on our financial standing, and I must say, we are most fortunate to have Josh looking after our dollars and cents. Secretary Nancy Howes told of the Boards activities for the year and also the society's social doings. Hearing it all read off at once makes us realize what an active society we are. Isabelle Flynn of the nominating Committee presented a slate we couldn't say 'no' to—and we have an exciting new board to lead us this year.

Elected as officers were: President-Brendon Joyce, Vice President-Catherine McNamara, Treasurer-Joshua Crowell, Recording Secretary-Beth Deck, and Corresponding Secretary-Rosemary Mailhot. Your new Board of Directors are: Joan Martin and Jack Sheedy for three years, Jim Coogan, Jr. and Seth Crowell for two years, and Sarah Kruger and Nancy Sears for one year. Congratulations and very good wishes to one and all.

Very special thanks to Lu and her board. We have had an especially productive two years with them and our new board has some large shoes to fill.

As promised, John Scofield presented an interesting program on antiques. Just about all the pieces brought in for evaluation had a great story connected to it. A few of our members who brought their item in rather nonchalantly returned it home very carefully, with a whole new respect for Aunt Myrtle's generous gift. The refreshments lived up to the advanced billing and everyone went home with a few more calories on board than they had intended. Thanks, Board!

ANNUAL FALL CLEANUP

Some of the recent newsletters have been overlong and we've not had room to catch up on everything. Jim Carr brought a group of Dennis Seniors for a tour of Josiah Dennis Manse. They were all very interested in what the house guides had to say and are ready to come back "anytime" for another tour...."Grigga Dolly's" house (see February '95 newsletter) is no more. It finally succumbed to the laws of gravity—and probably with a little help from a backhoe—and has been removed leaving a very vacant spot where it stood for so many years....All the grading, removing, transplanting, and planting in Jericho's front yard has been completed and it looks great. An even greater plus is that it is now much safer to negotiate the Trotting Park Road corner. For the first time you can see a car coming at you from the left. Many thanks to the Town Engineering Dept. and the DPW....

Our dear Program Chairman Gertrude Lailey is out and about after undergoing a hip replacement and lots of therapy. Gertrude has decided she can no longer continue as Program Chairman. If anyone of you would be willing to take her job we'd all be delighted and Gertrude would give you any assistance and advise you might need to get started. Call Brendon at 385-6492.....The restoration at Jericho is coming along nicely. The "new" Jericho will be a must-see on everyone's list. Watch for a spring opening....The bullseye window needed for Jericho's front door is 8"x12", and we're still looking. Any leads or suggestions will be appreciated....Our very latest new members are: Mr. and Mrs. Leighton A. Clapp, Jr. and Mr. and Mrs. Everett Wilson. Welcome!....Kitty McNamara reported the third grade trip to Jericho in June was rewarding for the volunteers and informative and fun for the kids. Our hope is always that some of these Dennis youngsters will grow up and come back to the Manse and Jericho as volunteers—and some of them have!....Burton Derick, a Dennis Port 'boy' now living in West Virginia, responded to the article on Dr. Vanever Bush. In 1955 when Burt was about to graduate from high school his interest in the sciences led him to seek advice from Dr. Bush regarding various schools. In their conversation Dr. Bush revealed that he had the chance to do his life over he would have chosen to be a medical doctor, not a physicist. He did not elaborate but it startled revelation for one who had gone so far in his field. It's easy to understand where anyone involved with such mass destruction might have second thoughts. Burt did become a physicist, and although he has contributed only to the benefit of man through optical fiber, air filter, and safety glazing technology—on second thought he also would probably be in another profession. Thanks for your contributions, Bert—you're young yet, try something else!
